Use the Eshopps Float Valve as part of an automatic top-off system you create to replenish aquarium water lost through evaporation.. Once you get a mouthful of water close the gang valve When the pump is turned on the water will flow however this will create pressure on the gang valve therefore I would recommend that you bend this over into the aquarium and open the gang valve.

If your threads leak air just use a little teflon tape to seal it up Buy valves here: Music attributed to Kevin Macleod under Creative Commons.
